

Tasks to solve in this exercise

Description of desired outcome:

For our file “sales_consolidated.xlsx” we want to build a macro that uses a fixed exchange rate to convert the Weekly_Sales from USD to Euro or Rupee.

Specification:

- The user can choose between Rupee and Euro in a dropdown box.
- You can use a fixed exchange rate 0.83 for Euro and 73.54 for Rupee.
- Use “Euro” and “Rupee” as name labels but actually use the numerical values in the calculation.

Hint: You can do that using the Syntax: *Name:Value*

Test the macro with the data from “sales_consolidated.xlsx”.

Good luck and enjoy the assignment! 😊
